

Massachusetts Department of Correction
Luis S. Spencer, Commissioner
Institution Length of Stay:
January 2011

Rhiana Kohl, PhD, Executive Director, Office of Strategic Research and Planning

Prepared by Jessica Simes, Research Intern • August 2011

Definitions and Overview

This research brief provides an overview of the number of days that inmates spend at each facility—the average institution length of stay. This information can be useful for operations, research or planning purposes as it provides an estimate of how long inmates stay at each facility on average. More specifically, institution length of stay is defined as the number of days between the most recent transfer date to the given facility or the most recent return from a break in custody and the date of January 1, 2011. Trips to hospitals, court, or temporary holds are not considered a break in custody as they are typically moves of a temporary nature.

Data and Methodology

The data used in this study are derived from the January 1, 2011 data file of the active Massachusetts Department of Correction (MADOC) jurisdiction population, including those sentenced to criminal and civil sentences, and those awaiting trial. Institution length of stay is calculated by a time analysis using data from the inmate management system (IMS) admission and release movement history. The most recent transfer date to the facility or the most recent return from a break in custody (release) from the MADOC for each inmate in each institution is subtracted from January 1, 2011, and descriptive statistics were taken across each institution. To obtain accurate estimates of the average length of stay for institutions, extensive manual data cleaning was performed prior to the final analysis.

Table 1. Institution Average Length of Stay (LOS) in Days, January 1, 2011 Population

Institution	AVG LOS 2011	AVG LOS 2009	% Change	Median	Min Days	Max Days	Stan. Dev.	Facility Count
Bay State Correctional Center	1028	1012	2%	415	1	7130	1615.6	313
Boston Pre-Release Center	169	187	-10%	120	2	848	168.6	193

Spectrum Women and Children's Program	79	n/a	n/a	53	31	178	67.1	4

¹ Length of stay comparisons from 2009 to 2011 at MASAC should be viewed within the context of the following changes. In April 2009 the security level of MASAC changed from a medium to a minimum designation. In addition to continuing to house 30-day substance abuse civil commitments under MGL Ch. 123 Sec. 35, the facility began housing inmates serving criminal sentences.

² In June 2009 MCI-Cedar Junction officially became the reception center for males, and one unit was designated as medium security. Prior to this time, MCI-Concord was the male reception center.

Table 1 presents data derived from the MADOC jurisdiction population. Average institution length of stay for 2011 in the first column should be compared to the average length of stay calculated in 2009, in the second column. This comparison is being made because the most recent average institution length of stay was calculated in 2009, and it was not calculated in 2010. The percent change between these two time periods is displayed in column three. In addition to the mean institution length of stay, we include the median, minimum and maximum, standard deviation (measure of spread) and the count for each institution on January 1, 2011. The majority of institutions (13) saw an increase in average length of stay between 2009 and 2011, while four institutions saw decreases in average length of stay (percent change data not available for Brooke House, Lemuel Shattuck Hospital, and Spectrum Women and Children’s Program).

Table 2. Institution Average Length of Stay (LOS) in Days by Security Level, January 1, 2011 Population

Table 2 displays the same information as Table 1, but the institutions are disaggregated by security level. Institutions can have housing designated at different security levels. The first two columns show the average length of stay for the given institution, and the following columns show the average length of stay by security level where applicable. Inmates classified at Level 4 typically have the highest average length of stay, which is a function of classification.

It is very important to note that the length of stay for the institutions with mixed security levels is solely based on when the inmate entered the facility, not when they moved to the designated security level of that facility. Thus, this data should be interpreted as providing the following information: for those incarcerated at a given security level on January 1, 2011, this number represents their average length of stay for that institution. Thus, this data does not tell us the length of stay for a given security level, but rather what the average length of stay for inmates at the institution classified as such on January 1, 2011.

Table 3 Institution Average Length of Stay (LOS) in Days by Commitment Type, January 1, 2011

Institution	All MADOC		Criminally Sentenced		Civily Sentenced		Awaiting Trial/Detainees	
	LOS	Count	LOS	Count	LOS	Count	LOS	Count

Old Colony Correctional Center	611	848	611	848	--	--	--	--
Pondville Correctional Center	272	186	272	186	--	--	--	--
South Middlesex Correctional Center	209	126	209	126	--	--	--	--
Souza-Baranowski Correctional Center	454	1252	458	1230	6	2*	230	20
Spectrum Women and Children's Program	79	4	79	4*	--	--	--	--

*Due to small population size, these values should not be considered a robust measure of length of stay for the institution.

Table 3 displays the same information as Table 1, but the institutions are disaggregated by commitment type. The first two columns show the average length of stay for the given institution, and the following columns show the average length of stay for those criminally sentenced, civilly sentenced, and those detained or awaiting trial. Aside from Massachusetts Treatment Center which houses those designated as a “sexually dangerous person,” the criminally sentenced typically have the longest average length of stay of the different types of commitments.
