## Data and Methodology

This report summarizes major sociodemographic changes for the City of Pittsburgh and city neighborhoods using data from the Census Bureau's American Community Survey (ACS). Previous and related reports are available on the web page for the University Center for Social and Urban Research (UCSUR) at the University of Pittsburgh: [www.ucsur.pitt.edu](http://www.ucsur.pitt.edu).

The ACS is an ongoing survey program which produces estimates of population characteristics for all areas within the United States. The ACS produces annual updates on population characteristics across a broad range of socioeconomic variables for geographic areas with populations greater than 65,000. For smaller geographic areas, including census tracts and block groups, the ACS produces estimates of population characteristics generated from data aggregated over five years of survey responses. City of Pittsburgh neighborhoods are currently defined as either a single census tract or a collection of census tracts and block groups, making the five-year estimates the only ACS data available for neighborhood-level analysis. The data profiles compiled here compare ACS estimates data for two non-overlapping five-year time periods: 2009-2013 and 2014-2018.

Profiles are compiled for 86 of the 90 neighborhoods currently defined by the City of Pittsburgh Department of City Planning. In addition, data for the Central Business District (Downtown) and Bluff neighborhoods are combined into a single profile. Excluded are profiles for the city neighborhoods, currently defined as Chateau and South Shore, due to the minimal residential populations of each area.

Also compiled are profiles for selected subareas within the seven-county Pittsburgh Metropolitan Statistical Area (MSA), currently defined as Allegheny, Armstrong, Beaver, Butler, Fayette, Washington and Westmoreland Southwestern Pennsylvania. These subareas include: (1) the City of Pittsburgh; (2) Allegheny County; (3) the Pittsburgh MSA; (4) the municipalities, or parts of municipalities, within Allegheny County but outside of the City of Pittsburgh; and (5) an area defined as the six counties of the Pittsburgh MSA with the exception of Allegheny County.

The ACS is a sample-based data collection program. The five-year ACS estimates, by aggregating a larger number of survey responses, typically have smaller errors than one-year ACS estimates for the same geography. Nonetheless, sample and other measurement errors can impact the data presented here, especially for estimates for smaller geographies, including city neighborhoods and small population subgroups. While the ACS data for the 2014-2018 period is the most recent five-year data available as of December 2019, it nonetheless represents historical data. The comparison of the 2009-2013 and 2014-2018 periods uses data over a ten year period, but data for each period is presented as an average over a five-year period. Any trends identified by comparing the two periods can be interpreted as change over a five year period. Not all trends identified in these profiles have necessarily continued, and some trends may have accelerated. These profiles are intended to be one data source to be used in conjunction with other data for those studying change within the City of Pittsburgh and its component neighborhoods.

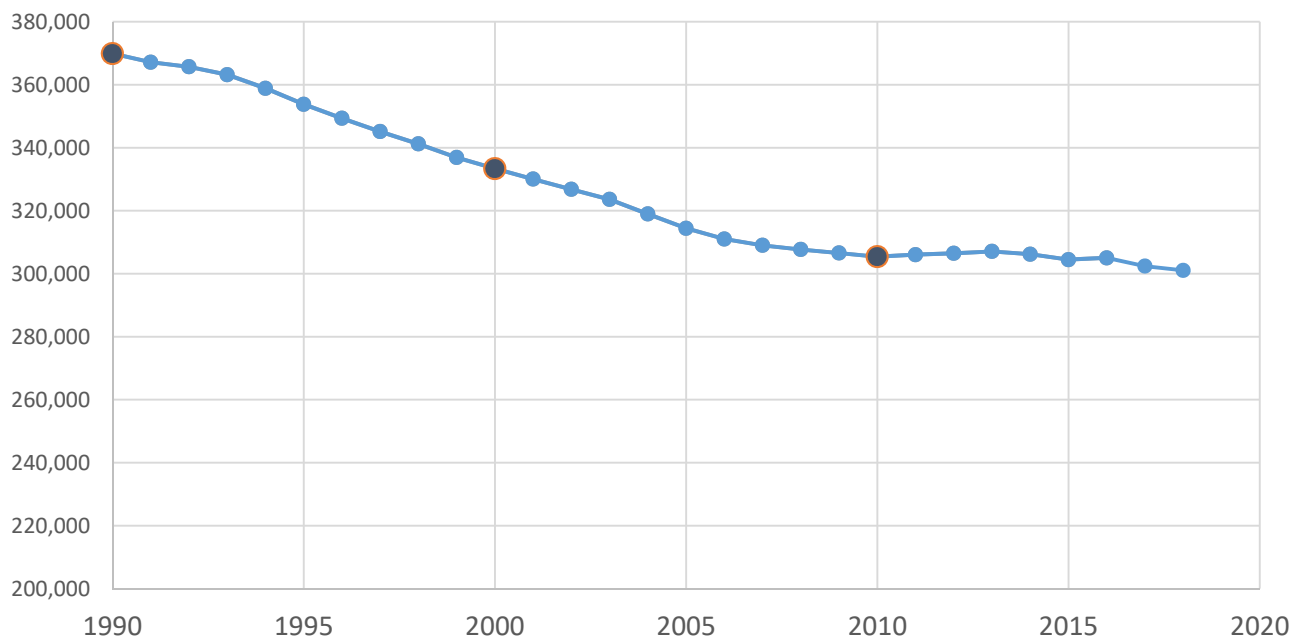

## Population Trends in the City of Pittsburgh

Current demographic trends in the City of Pittsburgh contrast an emerging stability for the city’s overall population with continuing change in the characteristics of city residents. The modern City of Pittsburgh has been shaped by nearly continuous population decline through much of the 20th Century. Historical population data typically cites the city’s peak population as the 676,806 residents enumerated in the 1950 decennial census, with ongoing decline recorded over each subsequent decade through 2010.

Shifting away from that long term decline, the population of the City of Pittsburgh has maintained a certain level of stability over the most recent decade. The most recent data from the Census Bureau’s Population Estimates Program (PEP) show that the city’s population increased slightly between 2010 and 2011 for the first time in several decades. More recent population estimates do not indicate that the city sustained population gains, but only minimal population decline has been estimated in subsequent years. Between 2010 and 2018, the Census Bureau estimates that the city’s population declined from 305,405 to 301,148, an average annual population decline of 0.18%, which would be the slowest rates of population decline for the city in over six decades. The upcoming 2020 decennial census will be the next complete enumeration of the population and may result in a different population count in 2020 than population estimates to date suggest.

Recent stability in the total population within the City of Pittsburgh masks ongoing and significant changes in the characteristics of the city’s resident population. The following sections highlight the major socioeconomic trends impacting the City of Pittsburgh and how those trends compare to changes within the broader Pittsburgh metropolitan region and the nation.

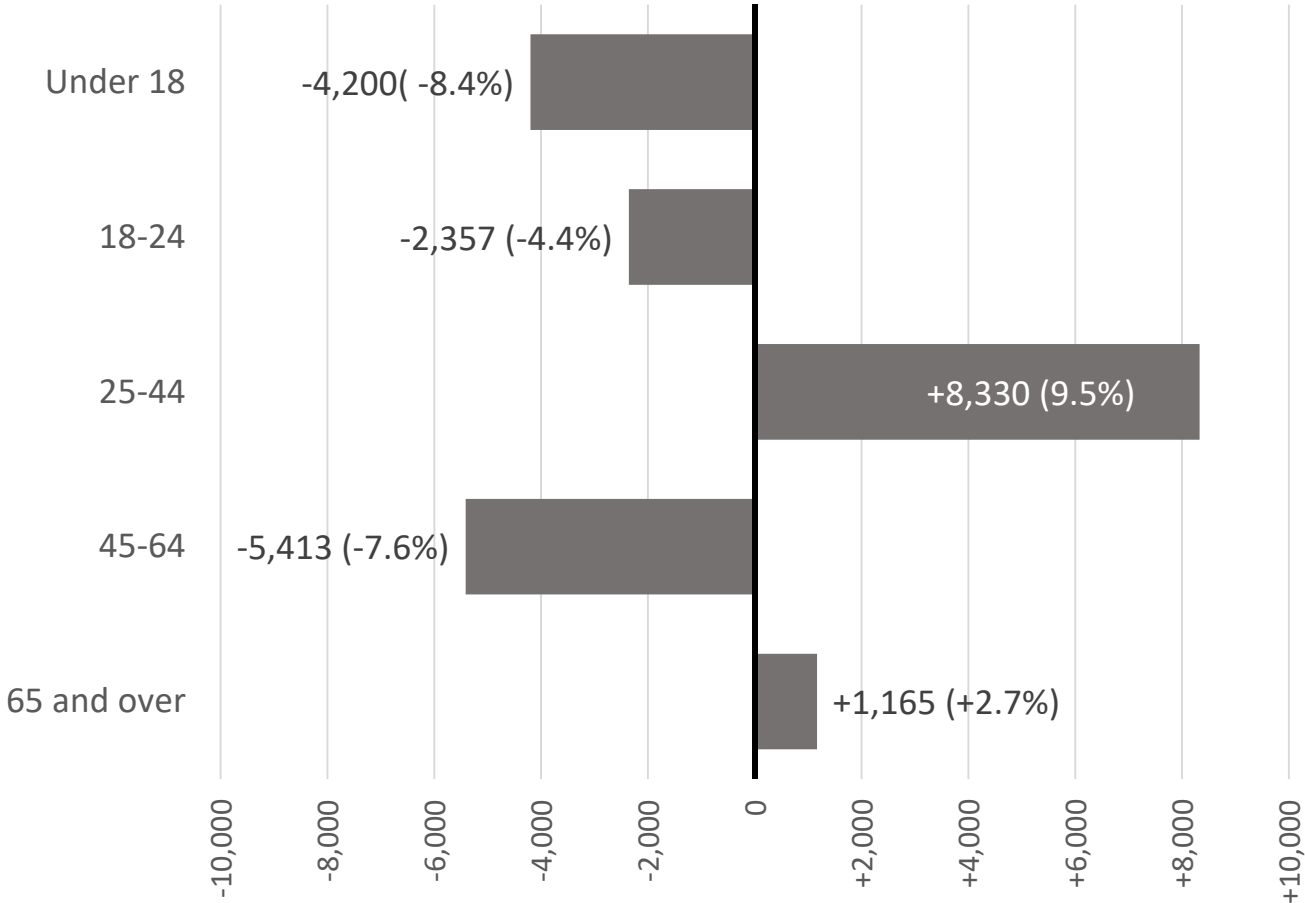

Figure 1. City of Pittsburgh Annual Population Estimates, 1990-2018

Age

In the decades immediately following World War II, regional out-migration and the suburbanization within the Pittsburgh region emerged as major factors depressing the city’s population. This population loss was compounded by regional population declines which accelerated in the 1980s. More likely to leave the city were younger families, resulting in a relatively older age profile for city residents compared to either the nation or suburban areas of the Pittsburgh region. The most recent five-year ACS estimates also show a distinctly different shift in the age distribution of the population living within the City of Pittsburgh. Between the 2009-2013 and 2014-2018 periods, ACS estimates shows that the city’s population between the ages of 25 and 44 experienced a gain of 8,330 or +9.5%. Other than for a smaller increase in the population age 65 and over, +1,165 or +2.7%, all other age groups are estimated to have declined between the two periods.

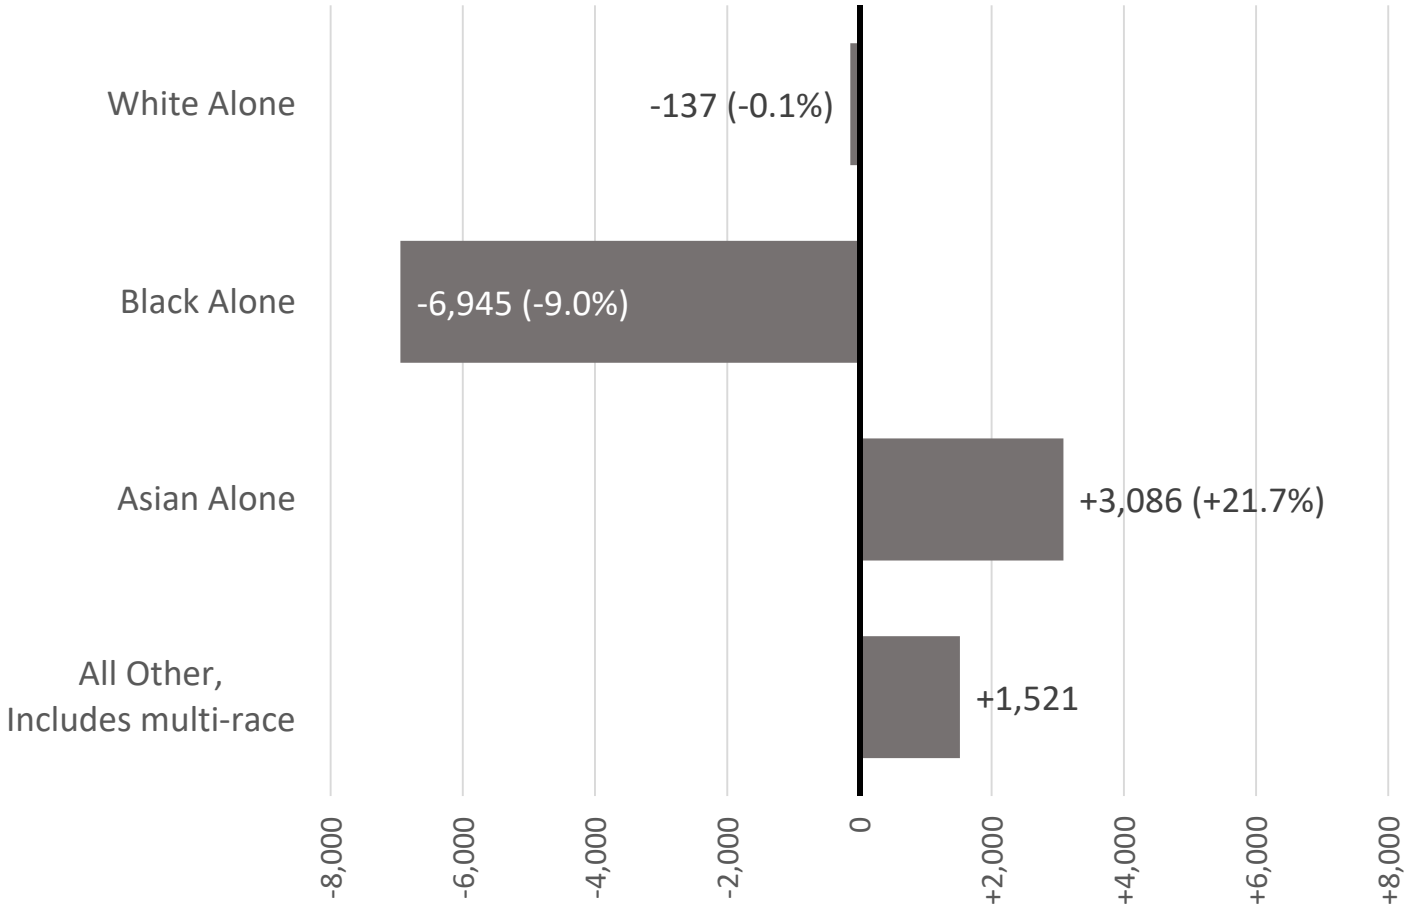

Figure 2. Population Change by Age Group Between 2009-2013 and 2014-2018 Periods  
City of Pittsburgh

Race

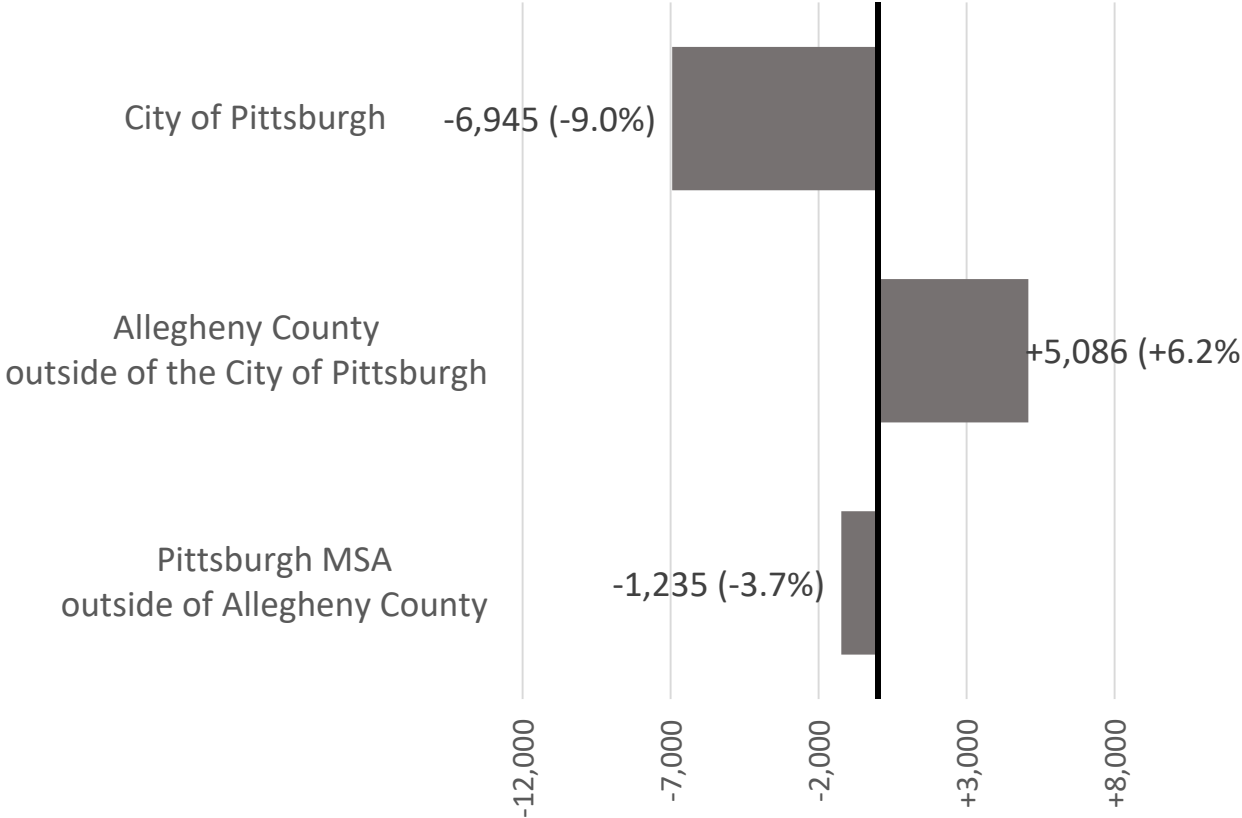

Also continuing is a shift in the racial composition of City of Pittsburgh residents. Between the 2008-2013 and 2014-2018 periods, the Black-alone population within the City of Pittsburgh decreased by 6,945 or -9.9%, while the city’s White-alone population declined by just 137, a decline of less than -0.1%. Over the same period, the city’s Asian-alone population increased by 3,086 or +21.7%. In areas within Allegheny County but outside the City of Pittsburgh, the Black-alone population increased by 5,086 or +7.1%. This latest data shows a continuation of a shift of the African-American population within Allegheny County. In 1970, just under 72% of Allegheny County’s Black population lived within the City of Pittsburgh. In the latest 2014-2018 five-Year ACS estimates, 55.4% of Allegheny County’s Black-alone population now resides outside the City of Pittsburgh.

Figure 3. City of Pittsburgh – Population Change by Race Between 2009-2013 and 2014-2018 Periods

PROFILE OF CHANGE IN THE CITY OF PITTSBURGH – JANUARY 2020

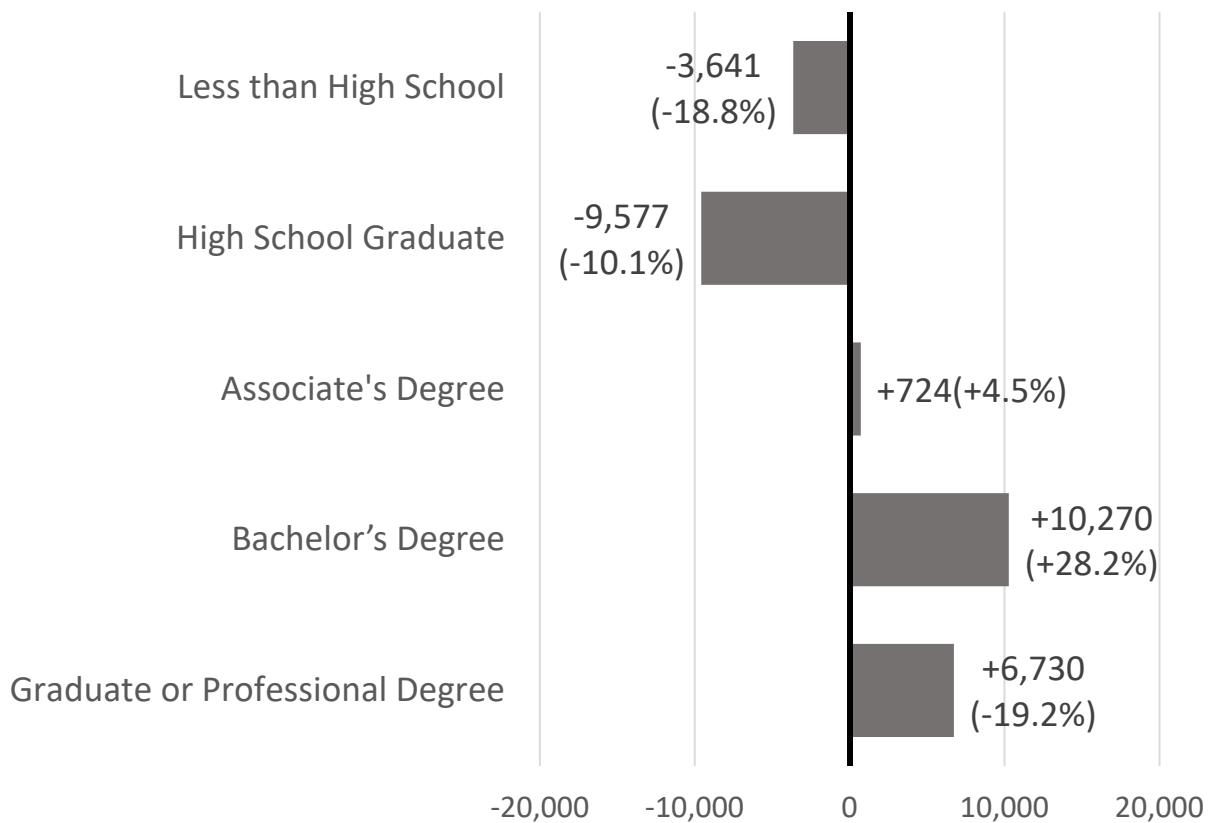

Figure 4. Population Change by Race Between 2009-2013 and 2014-2018 Periods  
City of Pittsburgh Compared to Remainder of Allegheny County and Remainder of the  
Pittsburgh MSA

Educational Attainment

The educational attainment of City of Pittsburgh residents continues to shift both due to population migration and shifting age demographics. Within the city, the population with less than a high school degree declined by 3,641, or -18.8%, while the population with a high school degree declined by 9,577 or -10.1% between the 2009-2013 and 2014-2018 periods. The city’s population with a bachelor’s degree increased by 10,270 or +28.2%, while the population with a graduate or professional degree increased by 6,730 or +19.2%.

Figure 5. Population Change by Highest Level of Educational Attainment Between 2009-2013 and 2014-2018 Periods, City of Pittsburgh

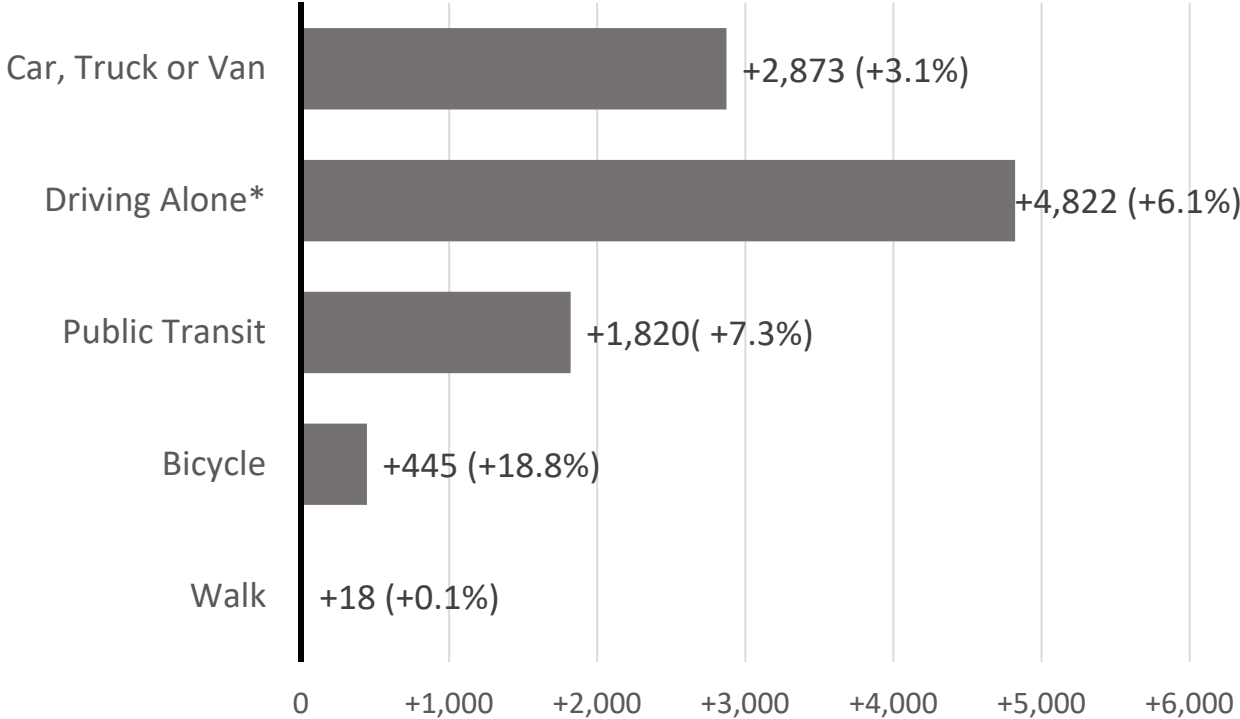

Note: Categories represent highest level of educational attainment and are mutually exclusive. High school graduates include those with some college but not obtaining any additional degree.

Commuting

Increases for all modes of commuting result from the increasing employment levels for City of Pittsburgh residents. The total number of workers resident within the city of Pittsburgh increased by 5% between the 2009-2013 and 2014-2018 periods. Use of public transportation among City of Pittsburgh residents increased by 1,820 or +7.3% over this period while those driving, or who were passengers, increased by 2,872 or +3.1%. The percentage of workers who drove alone to work increased by +6.1%, reflecting of a decrease in those commuting as passengers in vehicles, such as carpools.

Commuting by bicycle showed the greatest percentage increase between the 2009-2013 and 2014-2018 periods. While the number of commuters who walked to work remained relatively flat, 445 more city residents commuted by bicycle, an increase of +18.8%. It is important to note that commuting data collected by the ACS reflect the transportation mode used by workers traveling to their place of employment and does not capture bicycle usage for other types of trips, including transportation to school, recreation, or for other purposes.

Figure 6. Change in Transportation Mode for Commuters between 2009-2013 and 2014-2018 Periods, City of Pittsburgh

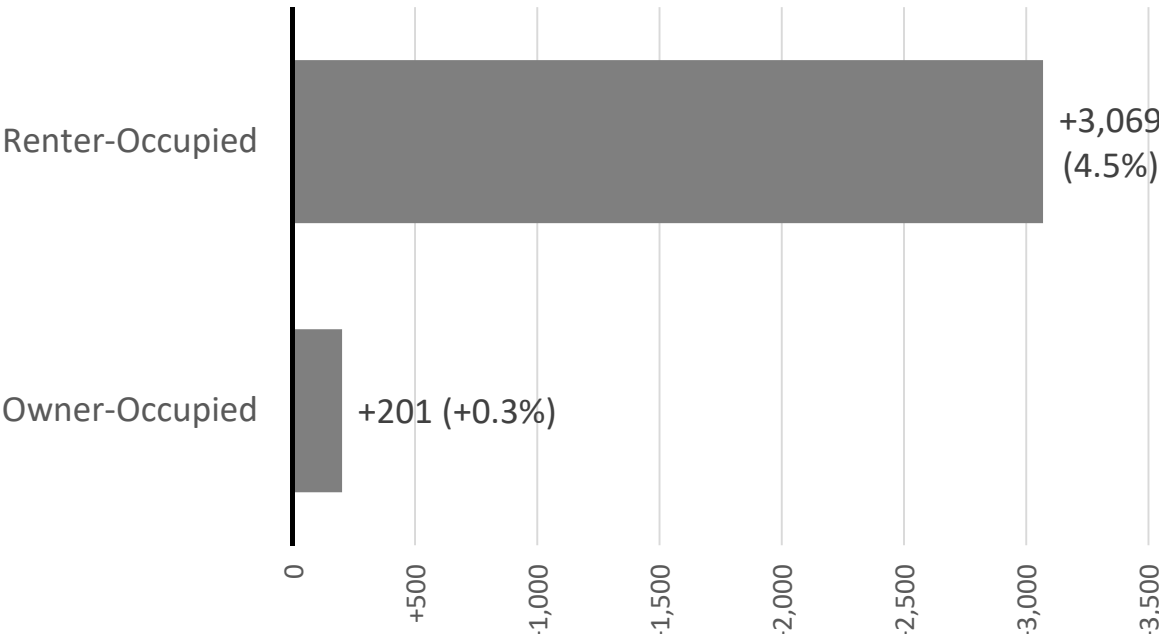

\* Included in Car, truck or van total, excluded is carpooling

Housing Tenure

Tenure refers to the financial arrangements under which the household occupies all or part of a housing unit. A housing unit is owner-occupied if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent.

Between the 2009-2013 and 2014-2018 periods, renter-occupied housing units within the city of Pittsburgh increased by 3,069, or +4.5%, while the number of owner-occupied housing units increased by 201, or +0.3%. The increase in renter-occupied housing units within the city of Pittsburgh is matched by an increase of 5,305 (or +4.7%) in renter-occupied housing units within Allegheny County, but outside of the city of Pittsburgh.

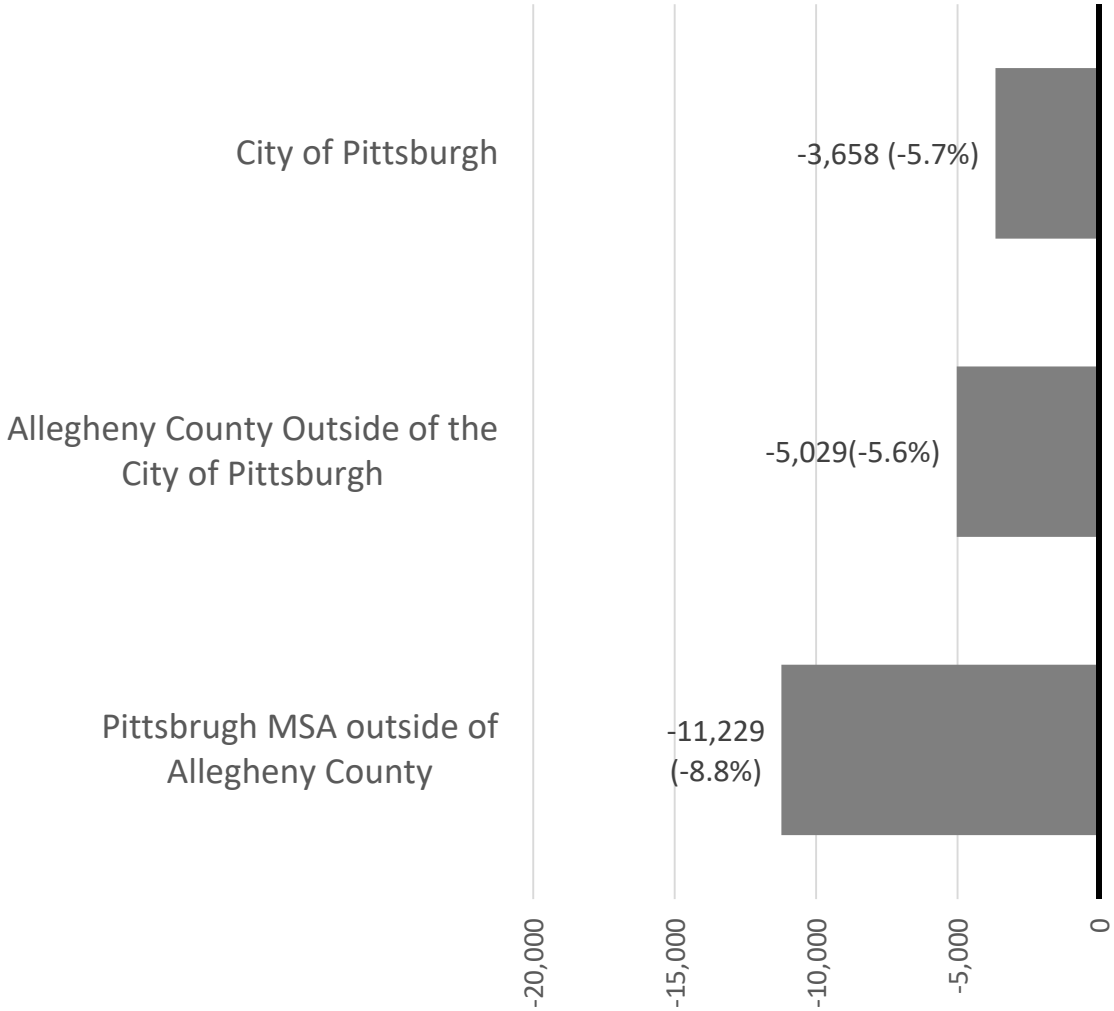

Figure 7. Change in Housing Tenure between 2009-2013 and 2014-2018 Periods  
City of Pittsburgh Occupied Housing Units

Poverty

The total population living below the poverty level declined in the city of Pittsburgh by 3,658 between the 2009-2013 and 2014-2019 periods, a decline of -5.7%. Areas within Allegheny but outside of the City of Pittsburgh experienced a decline in the total population living below the poverty level by 5,029 or -5.6%. Across areas within the Pittsburgh MSA but outside of Allegheny County, the total population living below the poverty level decline by 11,229, a decline of -8.8%.

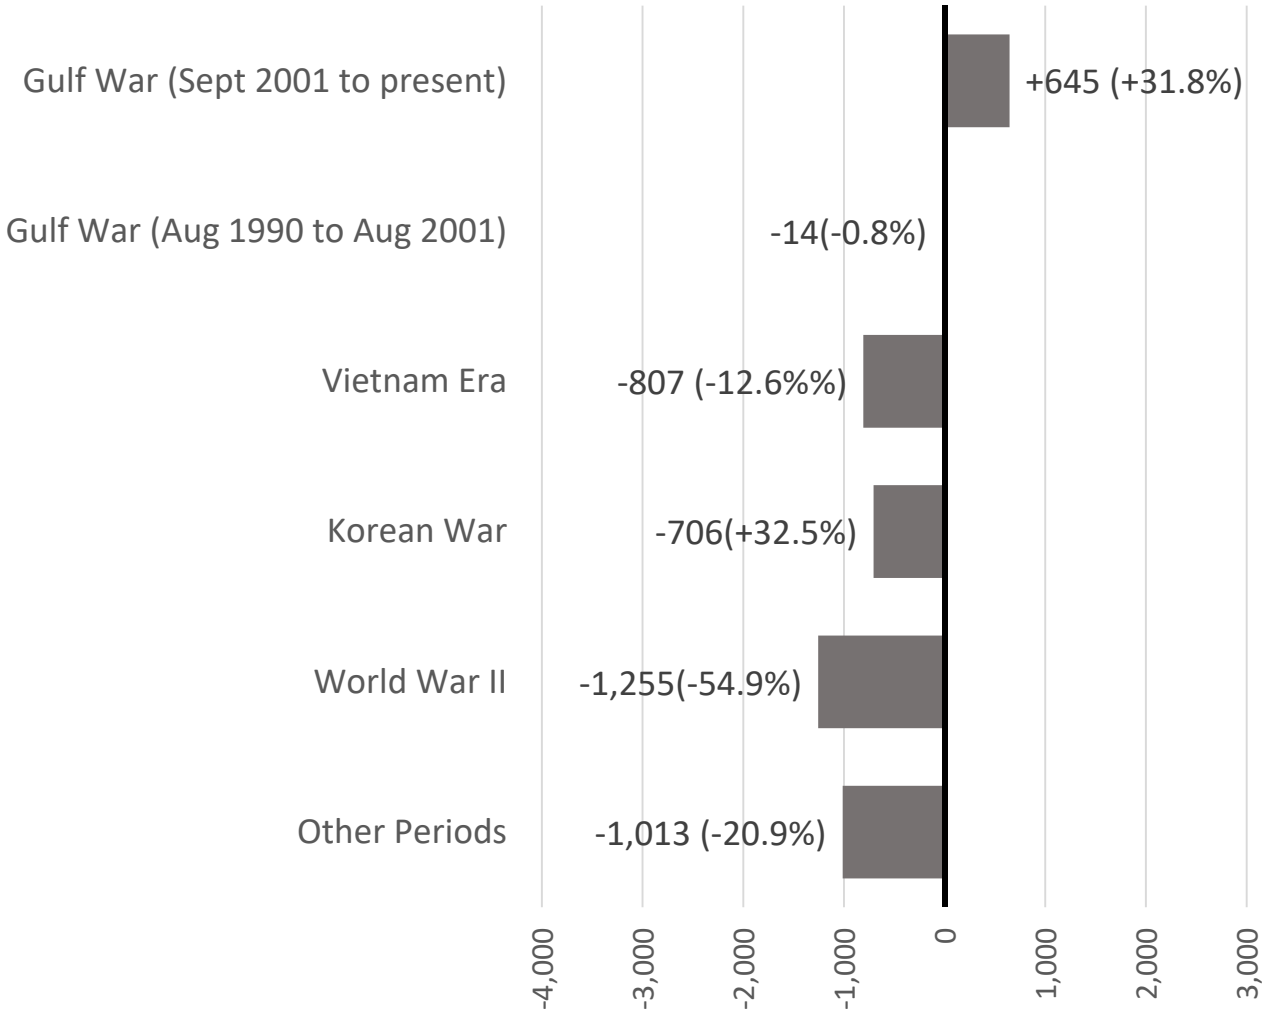

Figure 8. Change in Population Living Below the Poverty Level

Veterans

Change in the veterans’ population residing within the City of Pittsburgh reflects the ongoing demographic change within the city and national trends in the population of veterans. While there has been an increase in the youngest veterans, typically those whose latest period of service has been since September 2001, all other veterans groups in the city are currently declining. Currently, all new veterans, those leaving military service, are counted as veterans of the Gulf War (2001 to present) period. The largest decline has been in the oldest group of veterans with service in World War II, which declined by 1,255 or just under 55% between the 2009-2013 and 2014-2018 periods. Currently the largest group of veterans in the City of Pittsburgh, as it is for the nation, are Vietnam Era veterans.

Figure 9. City of Pittsburgh – Change in Veterans Population by Latest Period of Service Between 2009-2013 and 2014-2018 Periods

## Data Profiles

Profiles are compiled for 86 of the 90 neighborhoods within the city of Pittsburgh. In addition, data for the Central Business District (Downtown) and Bluff neighborhoods are combined into a single neighborhood profile. Excluded are profiles for the city neighborhoods currently defined as Chateau and South Shore, due to the minimal residential populations of each area. Also include are five profiles for larger areas, or subareas, within the Pittsburgh Metropolitan Statistical Areas (MSA).

Pittsburgh MSA is currently defined as seven counties within Southwestern Pennsylvania, including Allegheny, Armstrong, Beaver, Butler, Fayette, Washington and Westmoreland. In addition to a profile for the Pittsburgh MSA, individual profiles are compiled for: the City of Pittsburgh; Allegheny County; the municipalities, or parts of municipalities, within Allegheny County but outside of the City of Pittsburgh; and an area defined as the six counties of the Pittsburgh MSA with the exception of Allegheny County.

\* Previous versions of this report classified Tract 402 Block Group 1 as part of Terrace Village.

## Notes

All data was compiled via the Census Bureau’s application programmer interface (API) using the R programming language. Data was compiled for two ACS 5-year periods: 2009-2013 and 2014-2018. The following data itemizes the specific ACS data tables used to compile individual profiles.

Population by Race	B02001: Race
Population by Age Group	B01001: Sex by Age
Educational Attainment	B15003: Educational Attainment for the Population 25 Years and Over
Commuting	B08301: Means Of Transportation to Work
Housing Tenure	B25003: Tenure
Poverty	C17002: Ratio Of Income To Poverty Level In the Past 12 Months
Veterans Status	B21002: Period Of Military Service For Civilian Veterans 18 Years And Over

All levels of educational attainment represent the highest degree attained and each group is mutually exclusive. The number of high school graduates include those with a high school degree or equivalent, but no additional degree. This group will include those with some college, but with no additional degree. The number with associates’ degrees is itemized separately.

Veterans with service in multiple eras are grouped by latest period of service. For example, Gulf War (September 2001 to present) veterans include some veterans with service in the Gulf War (August 1990 to August 2001), Vietnam Era, and the Korean War. The category “Other Periods” include service exclusively between any of the itemized periods or before World War II.

Commuting table excludes the number who commute by all other means including taxicab, motorcycle, any other mode of travel and also excludes those who worked at home.
